The function below computes Fibonacci numbers one step at a time, keeping only the last two values instead of the whole sequence.

```
def fib(n):
    """Return the n-th Fibonacci number."""
    if n < 2:
        return n

    a, b = 0, 1
    for _ in range(n - 1):
        a, b = b, a + b    # step
    return b
```

The same loop in C, printed with the line numbers of the listing:

```
 1  #include <stdio.h>
 2
 3  int main(void) {
 4      for (int i = 0; i < 3; i++) {
 5          printf("%d\n", i);
 6      }
 7      return 0;
 8  }
```

Both listings keep their indentation exactly as they were written.
